About PadhAi Club

PadhAi Club is India's premier structured AI learning platform designed exclusively for children aged 5 to 15. We provide a safe, engaging environment where young learners develop future-ready skills through interactive, gamified courses that make learning exciting and meaningful.

Our innovative No-Code AI curriculum enables children to grasp concepts visually and practically—without complex programming or rote memorization. Through our comprehensive 360° learning framework, students enhance logical thinking, problem-solving abilities, confidence, and overall personality development.

Children create real-world projects including apps, chatbots, games, and AI models, transforming screen time into valuable skill-building experiences. Our all-in-one program seamlessly integrates AI for academics with practical skill development, ensuring complete guidance and safety.

PadhAi Club prepares every child for both academic excellence and success in tomorrow's digital world—making learning creative, impactful, and stress-free.

Course Overview

PadhAi Club's AI Foundation Program is India's first structured, safe, and improvement-driven AI learning course for children aged 5 to 15. Designed to introduce Artificial Intelligence through a simple, engaging, and guided approach, our No-Code methodology enables kids to grasp AI concepts visually and practically—without complex coding or rote memorization. The program seamlessly integrates AI with academics, enhancing concept clarity, homework performance, and logical thinking. Students learn by creating and experimenting, building real-world projects like chatbots, apps, and creative AI models—developing skills many adults haven't yet mastered. Through our mentor-guided, safe environment, we transform screen time into skill time. Each structured session nurtures curiosity, creativity, confidence, and personality development within our comprehensive 360° learning framework. PadhAi Club prepares children not only for academic excellence but for success in tomorrow's AI-driven world.

Course Curriculum

Here is a list of topics, you'll uncover through this course.

- **Hello AI! – Meet Your Smart Friend**

Students are introduced to AI tools like ChatGPT, Gemini, and Claude as smart learning companions. They learn what AI is, what it is not, and how AI can help with school subjects in a safe and responsible way.

Platform: ChatGPT / Gemini

- **How AI Thinks – Learning from Examples**

Students explore how AI learns from data and examples using simple, relatable activities. They understand patterns, training, and why AI can sometimes give wrong answers, building critical thinking early.

Platform: ChatGPT + Visual Demonstrations

- **Ask Smart, Get Smart – Prompting Basics** ✨

Students learn the art of asking good questions (prompting). They practice converting homework questions into clear prompts to get better explanations, summaries, and answers from AI.

Platform: ChatGPT/Gemini

- **AI for English – Read, Write & Speak Better** 📖✍️

Students use AI to improve grammar, vocabulary, story writing, reading comprehension, and spoken English. AI is used as a guide while students keep originality and creativity.

Platform: ChatGPT/Gemini

- **AI for Academics – Learn Faster, Revise Smarter** 📚🌐

Students use AI to simplify difficult concepts, create notes, revision charts, MCQs, and exam-ready summaries for Science and Social Studies.

Platform: ChatGPT/Gemini

- **Hello AI! – Meet Your Smart Friend (Block-Based)** 🤖

Students create a friendly AI character that talks and responds to simple questions, connecting academic AI concepts with visual block-based programming.

Platform: Scratch / PictoBlox

- **How AI Learns – Teaching Computers with Data**

Students train a simple AI model using examples and see how machines learn patterns, reinforcing concepts learned earlier through hands-on creation.

Platform: Scratch + Machine Learning for Kids

- **Feel-o-Meter Fun** 😊😮😞

Students build an app that detects emotions and displays how someone is feeling, learning how AI recognizes expressions.

Platform: PictoBlox

- **WikiSaurus Adventure** 🦖📚

Students create an AI-powered encyclopedia that answers questions about animals and dinosaurs using logic and information flow.

Platform: Scratch 3.0

- **My Digital Bookshelf**

Students build a smart bookshelf that recommends or displays books based on user choices, strengthening decision-making logic.

Platform: Scratch 3.0

- **Guess the Image – AI Gallery Challenge**

Students train AI to recognize images and guess what is shown on screen, learning how image classification works.

Platform: Machine Learning for Kids + PictoBlox

- **AI Math Master**

Students train AI to recognize images and guess what is shown on screen, learning how image classification works.

Platform: Machine Learning for Kids + PictoBlox

- **Weather World Tour with AI**

Students build a weather app that displays weather information for different locations, combining data and logic.

Platform: Scratch

- **Face Fun – Recognize Faces & Expressions** 😊

Students create an app that detects faces and identifies facial expressions using AI models.

Platform: PictoBlox / mBlock

- **AI Red Light, Green Light** 🚦

Students design a game where AI watches the player and decides when movement is allowed, introducing real-time decision making.

Platform: PictoBlox

- **Smart AI Translator** 🌐🗣️

Students build a translator that listens, translates words, and speaks them aloud, understanding language AI basics.

Platform: PictoBlox

- **AI Emotion & Age Estimator** 🧐

Students create an AI app that estimates emotions and age from facial data, learning ethical discussions alongside technology.
Platform: PictoBlox / mBlock

- **Voice-Activated Treasure Hunt** 🚩💀

Students build a game where voice commands guide players to find hidden treasure, strengthening speech recognition skills.
Platform: PictoBlox

- **Waste Wise – Sorting the Planet’s Burden** ♻️

Students train AI to sort waste into recyclable and non-recyclable categories, linking AI with real-world impact.
Platform: Teachable Machine + Scratch

- **Final Project – Build Your Own AI App** 🚀

Students design and build their own AI project using their preferred platform, applying everything they have learned throughout the course.
Platform: Scratch / PictoBlox / Thunkable

List of Projects

Kids can build the following projects with the expertise gained through this course.

1. Create your own AI-powered App
2. Create a Smart AI Chatbot for homework & doubts
3. Create an AI Presentation Maker
4. Create a BMI Calculator App
5. Create a Study Planner AI App
6. Create an AI Quiz Generator
7. Create a Story & Poem Generator AI
8. Create an AI Maths Solver
9. Create a Science Topic Explainer AI
10. Create a Pocket Money & Budget Planner
11. Create a Health & Fitness Assistant
12. Create a Voice-Based AI Assistant
13. Create an AI Game (Quiz / Puzzle / Logic Game)
14. Create an AI Drawing & Creativity Tool
15. Create a Smart Resume Builder for Kids
16. Create an AI Habit Tracker
17. Create an AI Language Learning Tutor
18. Create an AI Doubt Solving Tool
19. Create an AI Report Card Analyzer
20. Create an AI News Reader for Kids
21. Create an Environmental Awareness AI Project
22. Create a Smart Time Table Generator
23. Create a Chatbot for School Subjects
24. Create an AI-Based Project Showcase App
25. Final Project: Build Your Own Complete AI Application

Why Parents Trust PadhAi Club

1. Complete Parent Transparency

Regular PTMs + monthly report cards to track real academic and skill growth.

2. Fun-Based Learning System

Learning through games, stories, activities, and creativity instead of boring lectures.

3. Industry-Expert Tutors

Experienced mentors with real AI and tech background guiding every child.

4. No-Code, Child-Friendly AI

Kids learn AI concepts easily without complex coding or pressure.

5. Management & Life Skills Training

Special classes to build discipline, focus, communication, and confidence.

6. Lifetime Learning Access

All session recordings available forever for revision and flexibility.

7. Game-Style Assignments & Projects

Homework that feels like play and builds deep understanding.

8. Real-World Project Building

Kids create apps, chatbots, presentations, AI tools, and creative projects.

9. Safe & Personalized Environment

Small batches, guided learning, and complete safety for every child.

10. 360° Growth + Recognition

Academics + Skills + Personality, certification on completion, and scholarships for top performers.

Because tomorrow belongs to kids who
learn AI today

**Get started with India's
most trusted, safe & no-
code AI learning
program for kids.**
